Dear U.S. Department of Justice

As I read from your website, the United States and Microsoft tentatively agreed to the entry of a revised proposed final judgment to resolve the United States' civil antitrust case against Microsoft on November 6, 2001. I believe Microsoft is not guilty because of following points.

1) In 1995 years, No one can believe computers can develop or improve that fast. Microsoft Internet Explorer Web browser combine with Windows operating system. However, it is just a part of system in operating system. And unfortunately, other co-operate such as Netscape also created same system. It will not be happened if US government can make a law especially for computer system.

2) I believe it is only a kind business method. If other company can have that powerful to compete with Microsoft, Windows will not longer be the popular operating system anymore. Strongest company can earn more money than other. It is the rule in the business world.

3) However, I think Microsoft should have partnerships with other company, such as Netscape, JAVA, Sun Microsystems. Seen that, customer can get more benefits.

thanks for reading my email.

Suen Kit, Chau
